**B TECHNICAL SPECIFICATIONS-**

Shall be suitably manufactured from the combination of two main layers (inner and outer)

1. The inner layer consist of three tubular films of which each film is a further combination of seven sub layers (PE, Tie, Nylon, Tie, EVOH, Tie, PE) being extruded simultaneously as one film. The resultant thickness of this one film shall be 125 micron. The tolerance on nominal thickness at any given point and on the average thickness shall be +/- 10 percent. Three such tubular films are further joined in combination together suitably by inserting one tubular film in other to form an inner layer. These three tubular films shall be side sealed by heat sealing process keeping an overlap of at-least 13cm.
2. The outer layer shall be black in color and resistant to U.V. and woven as a tube on circular looms from PP tapes having width of 2.1 mm (tolerance of +/-5 percent) conforming to IS 11197 and linear density of 222 tex (2000 denier) in wrap direction and PP tape of 311 tex (2800 denier) in weft direction. The mass of the fabric shall be 170gm/met<sup>2</sup> with a tolerance of +/-3 percent and the ends /dm and picks / dm shall be 48x48 with a tolerance of +/-2. The denier of PP tape used in the manufacture of woven fabric shall be subjected to the following tolerances:
  - a) +/- 10 percent on individual value and
  - b) +/- 5 percent on average
3. Inner layer shall be inserted into the outer tubular layer and stitching from both the open ends the stitching shall be done with heracle stitch. The stitching row shall be separated by minimum 65mm from outer edge. The stitching shall be done with single fold over seam so that the stitches pass through a minimum 8 ;layer (12layer for 25 KL and above).
