The compressor package is designed for continuous duty condition. The components used in the package are of high quality standards and reliable to give desired performance. The list of components and its brief technical specification is given below.

MAIN COMPRESSOR ELEMENT:

This is the main component of the compressor package called as air-end. Free atmospheric air is being compressed due to high speed rotation of twin helical screws. an air-end is coupled directly through belt drive to an electric motor. Both air-end and motor is mounted on anti-vibration pads placed on main base-frame. With this arrangement we ensure less vibration and longer life of the compressor.

ELECTRIC MOTOR:

This is a belt drive mounting, 2 pole, TEFC, IP 55 protection, class F insulation & Eff2 efficiency class motor designed to take necessary starting torque and operational load variations. Make of the motor as per manufacturer standard.

AFTER COOLING:

High pressure discharge air is cooled in radiator type air-cooled after cooler. The condensation happens due to cooling of air and separates out in the moisture separator. Please provide auto-drain tap to remove water from the system.

AIR FILTRATION:

Trouble-free operation of this close tolerance, screw type compressor is achieved by suction air filtration system. It is with dry, paper type filter element in cartridge form for easy replacement. Complete filter assembly is within canopy of the compressor which avoids entry of heavy particles in compressor.

LUBRICATION:

Lubrication of the air-end gives dual advantage. It removes heat of compressor and lubricates screw bearings and gears. It is recommended ISO VG 68 grade oil is used

for this purpose. Pressurized cool and filtered oil is injected in the air-end and comes out of the compressor from discharge of the air-end along with compressed air. Positive oil pressure is ensured in air/oil separator tank. Hence we do not require any separate oil pump.

LUBE OIL FILTRATION:

Spin on type oil filter is used to filter lube oil before injecting to the compressor. This enhances long life of the compressor and reliable operation.

AIR/OIL SEPARATION:

Compressed air and lube oil is separated in a multi-stage air/oil separator tank. The separator also acts as an oil reservoir. High efficient oil/air separator element, limits oil carry over to desired level in the delivered air from compressor package.

LUBE OIL COOLING:

Temperature of the compressor system is maintained within limits by the cooling oil in radiator type air-cooled oil cooler. Bypass arrangement is provided to control oil temperature in winter seasons.

CANOPY AND BASE FRAME:

All components of the compressor package are mounted on a single base frame. It does not require any foundation. We provide appropriate lifting arrangement so that the complete package can be easily placed or more to new location by the overhead crane.

Metallic canopy of the compressor is of modular design. It is acoustically designed to limit noise level of the package to 70dBA ± 3 at a distance of 1 meter. The noise measurement is as per Pneuop/Cagi ISO2151 & ISO3744 standard. Proper doors are provided for easy accessibility to internal components. All connections are terminated outside of the canopy for easy couple & de-couple to external systems.

CAPACITY CONTROL:

Load/unload capacity control is provided which functions as per demand conditions. Power saving and utilization of compressor package is achieved due to this type of capacity control.

SAFETY DEVICES:

Following mechanical safety devices are provided to ensure safe operation of the package:

MINIMUM PRESSURE VALVE-

Maintains minimum air pressure in air/oil separator tank so that positive oil flow is ensured.

SAFETY RELIEF VALVE-

De-pressurize compressor system if pressure exceeds beyond limits of the system.

BLOW DOWN VALVE-

Ensures proper pressure relief arrangement during the unload condition of the compressor.

OIL LEVEL INDICATOR-

This is mounted on air/oil separator tank. Gives visual indication of minimum & maximum level of oil present in compressor system.

CONTROL PANEL:

This is auto star-delta starter cum microprocessor based control panel packaged on the same base frame within canopy of the compressor. Panel is wired and hooked up with main motor and all instruments with in the skid. The display of various operating parameters and setting is done by a man machine interface (MMI) installed on easily accessible height on canopy front part.

DISPLAY ON MMI:

1. Delivery air pressure
2. Air/oil temperature
3. Differential pressure across air/oil separator
4. Hour meter (total running hours and total loaded hours)
5. Start/stop , load/unload, emergency stop & test conditions
6. Reason for trip
7. Maintenance schedule (no. of hours indication)
 - a. Replace air filter element
 - b. Replace oil filter element
 - c. Replace air/oil separator element
 - d. Change of lube oil

SAFETY & CONTROL:

Following trip signals are provided to protect the machine from abnormal operating conditions

- High air- oil mixture temperature.
- PT1 pressure transmitter fault (for air pressure at compressor outlet)
- PT2 pressure transmitter fault (for air-oil at air end outlet)
- RTD temperature sensor fault (for oil temperature at airend outlet)
